

Electric Universe Theory, Tesla's Space Energy, & A New Galactic Model

Harry Jabs

Planets and stars remain relatively stable in their orbits, although it is unclear how the laws of gravity alone explain this, because gravity is only an attractive force. Orbits of man-made satellites around Earth must be periodically corrected by firing thrusters because their orbits are unstable. Indeed, in order to retain our present concept of gravitation, conventional science proposed that over 80% of the mass of the universe consists of dark matter. Although dark matter cannot be directly observed, it is now thought to be the "glue" of the cosmos.

By contrast, the Electric Universe theory proposes that the heavenly bodies

are electrically charged, either positively or negatively. Since electrical forces can be attractive or repulsive, a stable orbit is achieved. Using electrostatic calculations a model of cosmic bodies based on electrostatic potential wells is presented and compared to astronomical observations. We propose that Electric Universe concepts may be related to Tesla's research on harnessing energy from space.

Lastly, a new model of our Milky Way is presented in which a super-massive object at the center of our galaxy is a matter-to-energy converter that bathes all celestial bodies in the galactic plane in a vast neutrino flux. The more massive a body is, the more neutrinos it absorbs and converts to heat.

Zero Point Energy... The Driving Power of Magnets

Dr. Thorsten Ludwig

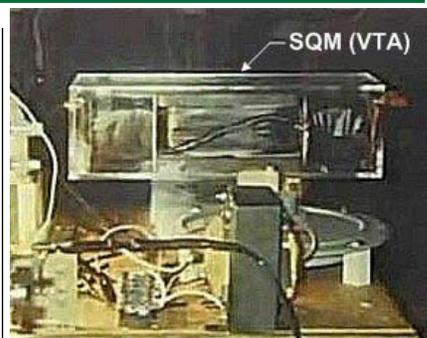

New physics shows that the quantum energy of space, zero point energy, is the power that leads to and sustains magnets. The energy exchange with the vacuum background photons, electrons and positrons account for the magnetic moment of the electron. Permanent Magnets are a collective effect of these magnets moment of the electrons in the material.

New magnet research on magnets, especially in the context of the Coler generators and Coler magnetic current device will be presented. An update will be given on the Coler current apparatus that was built. One feature of Coler's device is that the electric current is passed through a magnetized ferromagnetic magnet. An extraordinary current was found and studied.

An update on the experiment of the author and the team of the applied consciousness institute that studies the mental influence on a single electron in a magnetic field will be presented. An important quantum calculation will be presented that show possible energy influence of intention on the zero point energy and how that can be converted into a force and into an energy device. This sheds new light on the *inventor effect* with devices that only work when the inventor is present.

Finally, new information on Tesla's car will be revealed. Heinrich Jebens met with Tesla on November 26, 1930. Official documents contain details of the meeting and a description of the space energy generator that Tesla build into his car and about to test drive.

Revealing the Secrets of FREE Energy & Overunity Technology

William Alek

In the late 1980's, an amazing FREE Energy/Overunity device was demonstrated by retired MIT Electrical Engineer graduate and inventor, Floyd "Sparky" Sweet. It was called the Space Quanta Modulator (SQM) and later known as the Vacuum Triode Amplifier (VTA) by energy researcher, Tom Bearden. According to Tom Bearden's research, Gabriel Kron, the inventor of the Negative Resistor, mentored Floyd Sweet. Floyd worked with Gabriel at the same company, and knew the secret behind the Negative Resistor.

Floyd demonstrated his SQM device produced in excess of 5,000 Watts of electric power from the Dirac Sea of Negative Energy (Dark Energy) with as little as $10 V_{rms}$ at $1 mA_{rms}$ (10 mW) of electric excitation at 60 Hz. The device had an incredible power gain or Coefficient Of Performance (COP) greater than 500,000! This translates to an astonishing electrical efficiency of over 50,000,000%. This device is no doubt the ultimate FREE Energy device ever created by man – without question!

Since that time, attempts have been made to replicate Floyd Sweet's breakthrough device, but without success until now. Energy researcher and developer of the SmartPAK Overunity Energy Management System, William Alek will reveal and demonstrate the fundamental operating principles behind the Space Quanta Modulator.
