

## **Informative Medicine**

### **Electromagnetic Information Transfer between Biomolecules**

**Glen Rein, PhD**

Recent experimental evidence shows that chemical information can be transferred, via an electromagnetic field, from a biomolecule or drug to a target biological system. In most experiments the information is stored in water. Such imprinted water has no physical biochemical present, yet information stored in the water is capable of producing the same biological effects as the original chemical. Numerous university labs in a variety of countries have confirmed this phenomena and published the results in "peer-reviewed" journals. The phenomena has also been observed using living cellular systems.

This involves the concept of a biofield whereby intrinsic energy fields associated with all molecules and cells function independently of its biochemical counterpart and even replace it. This concept is based on the hypothesis that the biofield is an aggregate of EM fields embedded within atomic and molecular structures. This phenomena was first observed more than 100 years ago using homeopathic preparations, allowing the separation of the biofield from its parent biochemical. Current experiments indicate that not only water, but an EM field can also carry chemical information. This phenomena also involves the concept of water memory whereby water remembers information imprinted into it via an EM field. Experimental evidence indicates that water can record, store and replay this EM information.

## **Scalar Vortex Energy and Plasma Gas Therapy**

**An Effective Stress Management Technology for Healing the Cellular Regenerative System.**

**Jere Rivera-Dugenio, PhD**

There are two mechanisms in the body of concern to treatment of disease and recovery from disease and damage to the body. The first is the immune system, which seeks out, attacks and destroys invader cells such as cancer. Once its mission is complete, the function of the immune system is over. It does not heal anything, even its own damaged cells. The actual healing system is the cellular regenerative system, which is a rare electromagnetic system that consists of longitudinal scalar waves.

Based upon the principles of Tesla, Becker and Bearden, this scalar energy plus plasma gas technology reprograms morphogenetic energy fields of the cell, which in turn harmonizes an individual's autonomic nervous system

that controls stress, which is a major contributor to disease and the aging process. Patients with varying health issues from cancer to diabetes were used in this case study. Each patient was exposed to 30 minutes of the treatment on a daily basis for only 7 days.

Areas of improvement include harmonization of the autonomic nervous system, cardiovascular system, brain wave activity, neurohormonal regulation and psycho-emotional state. Data suggests using this technology within any disease prevention protocol may lead to important advancements in reversing disease and the aging process.

## **The Future of Medicine Bio-Scalar Technology for Optimal Health and Wellness**

**Sandra Rose Michael, DNM**

of anti-aging and the promotion of optimal health, wellness, rejuvenation, peak performance and longevity.

In this presentation you will:

- Gain understanding of the science behind bioscalar technology, biophotonic fusion, and various modalities of energy medicine.
- Identify real-life applications and advantages using bio-scalar therapies in various settings and the achievement of "miraculous" results.
- Learn about the documentation of dramatic improvements in lifestyle and function in case studies.
- Describe usage of scalar technology in various environments and applications with resultant improvement in overall health, wellness and homeostasis and the implications for promoting optimal brain states, wellness and longevity.
