

Application of Resonance on BioEnergy Fields

Sue Whittaker

The interest in programmable, vibrational medicine (PVM) is growing with an increasing number of versions hitting the market and making great claims. Some of these are better than others, so there are things you need to know to help you get the benefits you want. PVMs come from a breakthrough in science and medicine achieved through the application of three principles to a concept foreseen by Nikola Tesla: non-chemical

medicines. PVMs stem from the observably real power of intentions (e.g. speaking kindly to plants helps them grow), morphogenesis (universal principles that guide the dynamics of growth in living organisms) and particle entanglement of quantum physics that allows “these particles” to act like “those particles”).

Now, an enhancement for the use and effectiveness of PVMs is possible through the bioresonant frequencies of the Qest4 technology. This makes it possible to apply the specific bio-energy patterns of complex resonant signatures discovered and used in Russia for over 40 years. We are also seeing adaptations for using PVMs coming from the fields of radionics and even intercessory prayer. Many well known and ancient principles and practices can be combined in this new way.

Isoenergetic Cell Signaling Understanding Energetic Healing!

Paul Opheim

During our lifetime medicine has been dominated by pills, tablets, and injections of drugs coursing through our circulatory systems to try and treat or cure some affliction. However, there is a parallel older field of medicine which is based on a neuroenergetic response that is nonmolecular. Practitioners of acupuncture, qigong, neigong, homeopathy, and energy healing understand we are manifestations of energy. How does this energy translate into the medical world when dealing with chronic afflictions?

Since 1995, with our first published study using nonmolecular frequencies of human growth factors to our current clinical study for post traumatic stress disorder (PTSD), we have shown that the body is capable of responding to specific molecular energy frequencies. We examine:

- 1) the various cell signaling factors that tell cells how to divide, differentiation, migrate, interact and die
- 2) why signaling imbalances cause physical symptoms
- 3) examples of cell signaling imbalances that give rise to afflictions ranging from PTSD to Parkinson's to pneumonia
- 4) how signaling frequencies can be used to induce corrections in cell signaling and give rise to healing without adverse side effects.

Together we will explore how energetic medicine is continuing to emerge as significant ‘wave’ of the future for health.

Quantum Wave Rider

Open Source Disruptive Health Technology for the Home!

Maurice Bey

The Quantum Wave Rider is a handheld device used for pain management, sores, bruises, cuts, abrasions scar tissue, and more. The inventor, Maurice Bey, will explain aspects of the technology how and why it works, the science behind it, critical reference materials, and information on other components necessary to build it. This revolutionary technology is considered open source and a gift to the world directly from Maurice.

The basis of the invention starts with the work of Antoine Prioré... a World War II radar engineer. Documented by 5000 animal studies, Prioré was knocking out cancer from stage III to stage four cancer in within 1-2 days using his machine. There is extensive documentation by the French government who monitored Prioré over 20 years.

Boyd Bushman's Magnetic Beam Amplifier (US Patent number 59297320) focused on the apparatus and method for amplifying magnetic beam or bucking magnetic fields. Boyd, a former senior scientist from Lockheed Martin, is noted for his work with Skunk Works classified projects! Other materials to be covered are sourced from Tom Bearden. There will be a live demonstration!

Extensive information on open sourcing (both pro and con) detailing how it works will be provided.
