

Subself Revealed In Four Dimensions

Michael Meyers

Visual noise, that double vision aspect of our parallax stereo view, seen both before and behind the focal plane, actually reveals an innate capability for viewing 4 dimensional imagery in temporal space. Found as patterns, who's very existence is a direct consequence of intersecting paths of light. Those photons join and/or intersect on a plane where they magically generate patterns that are eventually absorbed by the eyes and rejoined.

We humans have the inherent ability to perceive and discern cross-sectional patterns of light. Those of us who are blessed with stereo sight and the ability to hyperVue can visualize "temporal masks" and view them in hyperspace. A simple exercise revealed during the presentation, will illustrate the process your mind uses to reconcile the data your eyes absorbs including higher dimensional vistas. At present, higher dimensional vistas are overwhelmingly ignored as *visual noise*. At worst they are dismissed as dangerous, which has been vital for the survival of the hunter/gatherer. From our most ancient of primal ancestors we are conditioned by our physical 3D surroundings to ignore and even reject 4DX patterns. To be clear, those images are not imagined nor are they optical illusions. They exist in 4-dimensions and are visualized by stereo ocular entities in "temporal space" whether one chooses to acknowledge them or not...

Perattian Thunderbolts of the Gods --- The Case for --- Plasma Cosmology

Ramon Careaga

Dramatic events during the early history of mankind have profoundly affected early human cultures resulting in legends, myths, rock art symbols, and earthworks. One common theme is that of the Thunderbolts of the Gods" (vajra)! The thunderbolts were of such magnitude that they may have been planetary wide events on a scale greater than that of Krakatoa by many order of magnitude.

Anthony Peratt PhD is a physicist with notable work at Los Alamos and JPL with high energy plasmas, particle beams, pulsed-power generators and the z-pinch effect. This work led him to be an influential proponent of violent *plasma cosmology* (the study of the formation of planets) the IEEE accepted alternative to the Big Bang Theory. His predictions and simulations indicated the possibility of 56-rayed structures created by solar induced plasmaspheric changes!

Peratt's calculations of their power levels were verified by Ramon's work which presents such a perfect specimen. Ramon demonstrates near zero probability of coincidence for the presence of the asymmetric octagons at Chillicothe, Newark, and High Bank, OH. This discovery of an actual Perattian Thunderbolt strike site in Kentucky almost a mile wide, in an octagon shape, forces us to question our notions of anthropology, astronomy, human history, and history with electricity itself!

Visionary Engineering ... the Tesla Way

Suzanne Price

Can anyone enhance their own innate abilities and intelligence to continue exploring the vision Nikola Tesla aspired to 100 years ago? Science suggests we all possess the potential to tap into our inner knowledge and super-consciousness. The question remains, how?

Tesla, one of the most celebrated 20th century geniuses, received brilliant insights that helped him design and construct numerous inventions that catapulted the world into the modern era. He had a natural ability to tap into the realm of 4D information. His extraordinary visions enabled

him to "see" an alternative future utilizing subtle energies and to completely imagine how inspired inventions operated before ever creating blueprints or devices.

It is possible to enhance one's ability to enter subtle information streams for creative solutions. First, it is necessary to understand the basics of how energy works in subtle and material realms including within human beings – the "wheelwork of Nature," as Tesla called it. Many inventors are able to do that. One can also learn to access the "consciousness information stream". Based on insights from the latest theories of energy and human awareness, we explore techniques to prepare one to tap into the super-conscious stream of collective intelligence to imagine new perspectives, invent or improve free energy devices, or solve perplexing engineering problems. Here, we will examine a variety of extraordinary techniques to explore one's own visionary genius.
