

**Tesla Purple Plates
and Other
ExtraOrdinary Technology!**

Joe Blankenship

The Tesla Purple Plate is the inventive collaboration between Nikola Tesla, and another inventor, Ralph Bergstresser. In 1942, Tesla told Bergstresser, the inventor of the Purple Plate...

If you want to find the secrets of the Universe, think in terms of energy, frequency and vibration.

Reportedly, the Tesla Purple Plates, or as they are sometimes called, Tesla Purple Energy Plates, function as transceivers of positive energy (negative ions) around them. The energy of the plates (possibly connected to Wilhelm Reich's Orgone energy) is reportedly beneficial to living organisms.

They are made of aluminum (1/16th of an inch thick) ...the atoms and electrons of the aluminum have been altered so the plates are in tune, in resonance, or in harmony with the basic energy of nature and the Universe. It is the same energy that causes the particles of every atom and molecule to be in constant vibration. They function as transceivers . . . creating a field of energy around themselves that will penetrate any material substance by osmosis.

With the keys of 'energy, frequency, and vibration', we can unlock the doors to advanced material science to accomplish things like precious metal extraction from black sands. They also help us understand the amazing properties of materials such as magnetite!

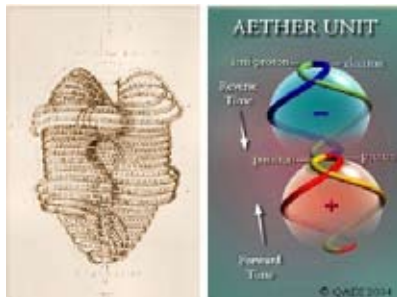

**Y-Pod Morphing
Architecture**

**The First Universal Assembler For
Shape-Changing Structures
Using Conventional Actuators For
Multi-Functional Applications**

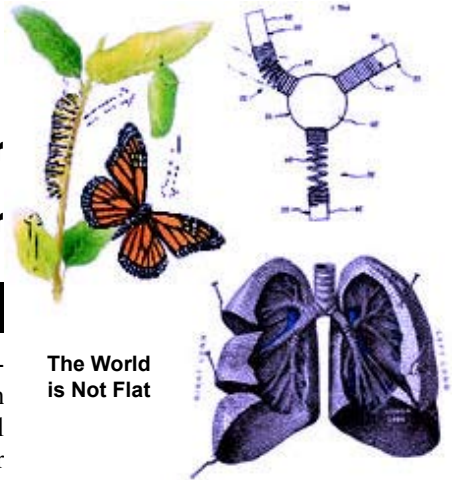

Steve Bridgers

The new patent on the Y-Pod morphing architecture provides the design engineer with the first 3-D universal assembly system. The potential for this paradigm shift in design engineering is comparable to the potential of Xerox GUI architecture in 1980. Y-Pod morphing architecture is the first 3-D universal assembler. The patent on the Y-Pod architecture is more than a design system for a shape-changing structure. The patent covers the entire system: design elements, actuators and functional modalities.

The world of nature is not totally flat, rigid and laminar. The world of nature is not square. The world of nature is cellular, vascular and variable

Science is moving slowly and being dragged kicking and screaming into a belief of the ancient concept of the aether... a universal energy that is the basis for all of the natural forces as well as its manifestation as matter. Orthodox science has been resisting the concept ever since the faulty Michaelson/Morley experiments could not find an aether drift close to the earth's surface even though its existence was proven in many later experiments. If science wants to really make progress then the scientists in all areas of endeavors must get into an understanding of the higher order aspects of aetheric energy.

**The World
is Not Flat**

in rigidity. The structure, functionality and actuation in nature are provided by the carbon atom. The chemical bonds of the carbon atom are like all chemical bonds: they are flexible and similar to springs. There are no straight lines or right angles in nature. There are no perfect spheres in nature.

The Y-Pod morphing architecture provides the functionality of the carbon atom to the design engineer. This new architecture can enable him to design systems that function on the nano, micro and macro scales!

**Aetheric Science
The Next Frontier**

Dan A. Davidson

**The more things change...
... the more they stay the same!**
Both of these drawings are vortexes.

Here, how various aspects of the aether manifests not only as the natural forces we are familiar with like electric and magnetic fields, gravity, etc. but how we as human beings are constructed and how we interact with the aether on the various levels in which we operate will be explained in detail.

Other aspects of the aether such as various levels of the aether. There are gradations of the aether associated with various levels of matter densities as well as a higher order aspects which few have ever contemplated. For example, there are "aethers" associated with mental and emotional states.
