

Practical --- Plasma --- Reformation

Plasma: 4th state of matter

Dorian Demetrulias

Plasma, the fourth state of matter, is a field whose boundaries are being expanded by studies made possible by the GEET engine technology invented by Paul Pantone. GEET is based on a self-generated low temperature plasma field. Using GEET devices, Paul discovered 181 new phenomena. Dorian, who studied under Paul, has carried the research forward and built a GEET Bike! To gain a better understanding of LENR phenomena, he reverse engineered Malcolm Bendall's design.

All of this hands on research led to Dorian's hexemeter hydrogen reactor... an engine modification device like a turbo that uses exhaust heat to reform steam with plasma into a supplemental hydrogen fuel that drastically reduces fuel consumption, enables the engine to use alternative fuels and converts carbon into oxygen in the combustion chamber with low energy nuclear reactions that are attributable to the oxygen rich exhaust. Prototype development efforts for his hexemeter design features computer controlled ignition and Aaron Murakami's spark system.

By sharing ideas on how to make hyperefficient, potentially overunity, reactor systems, Dorian hopes to spread awareness for funding his research and outfitting a laboratory for further research! One goal... to allow people to use these plasma engines like solar power and get paid to generate power!

Emerging Energy Sciences & Remote Viewing

Towards a Plasma Based Future...

Vernon Roth

Several radical technologies currently emerging are at the fringes of scientific inquiry and experimental engineering. Recent developments in hydrogen plasma systems, include high-energy plasma confinement, water-derived fuel systems, and the growing interest in plasma behavior as both an energetic medium and a potential carrier of anomalous electromagnetic effects. This presentation will explore the concepts of resonant energy stimulation and advanced energy harvesting techniques.

The second section explores magnetic-field manipulation and theories surrounding ZPE extraction as these are used in GEET based fuel systems. This includes experimental approaches to interact with the energetic structure of the vacuum itself. The magnetic theories of Edward Leedskalnin and his concept of "magnetic current" as a fundamental force distinct from conventional electrical theory has implications for resonance, material manipulation, and coherence, keys to extraordinary energy technologies.

The final section introduces Remote Viewing (RV) as a structured methodology for research and a counter point to emerging AI dependence. A brief tutorial demonstrates how RV protocols can be applied as a research tool to investigate emerging technologies, identify blind spots and material weaknesses, and create a pathway to move forward with paradigm shifting concepts!

Energy IS Medicine!

**HYDROGEN...
Missing Link bridging
energy, water, and
biological systems.**

George Wiseman

Hydrogen, one of the most fundamental elements in the body, plays a critical role in cellular function, resilience, and overall vitality. The latest AquaCure device, the AC60, is a great source of on-demand hydrogen for experiencing its practical benefits. The past year has culminated in the perfection of its new modification which will be demonstrated at the conference! Through live video, attendees will see the Micro-Bubbler in action—infusing water with ultra-fine gas bubbles that transform its behavior and interaction with living systems.

Deuterium, also known as "heavy hydrogen," is a form of hydrogen with one neutron and the usual proton, making it twice as heavy as regular hydrogen. While deuterium is naturally found in the environment, an excess of it in the body interferes with normal cellular function, particularly energy production in the mitochondria.

By drinking Deuterium-Depleted Water (DDW), consumers may experience a reduction in the negative effects of deuterium, leading to improved energy levels and metabolic function and potentially slowing the aging process. At the conference, George will demonstrate a working apparatus for producing DDW (also referred to as *new water*) using the AC60. This demonstration at the TeslaTech Conference will be a rare opportunity to see, touch, and understand how altering water at the atomic level may influence biological efficiency and performance!
