

Quantum Energy Extraction

Kiri Chukanov

Cosmology and Physics of the Micro-world are the two fundamentals of the Fundamental Physics. These two branches of the Fundamental Physics are two antipodes (opposites), but as well known, opposites intertwine and cannot exist separately. Mega-world (universe) and Micro-world represent the two physical boundaries of the world. The theoretical explanation of all phenomena in the Micro-world and Cosmos is possible only if these phenomena are studied together and in their mutual interaction. Micro-world and Mega-world have the same structure, the same rules of behavior, and they are symmetric to each other. In this work are presented several possible mathematical models of the universe.

Ball lightning represents a Giant Macro Atom. Being an atom, ball lightning builds its structure in observing all rules valid for the ordinary micro-atoms plus other rules, which are typical only for macro-quantum systems. In this work is presented a “working” mathematical model of ball lightning. With the help of this model it is possible to calculate the parameter values of the ball lightning (including energy characteristics) and to create effective technologies for production of Free Quantum Energy. To the participants on the conference (who are interested in this research) will be demonstrated some new experiments on Quantum Free Energy.

The QEG System

A “Hands On” Approach to Quantum Energy Extraction

Robert A. Patterson

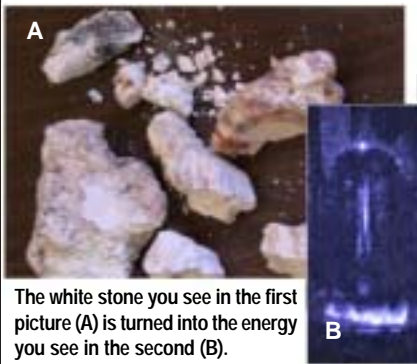

The construction of a Quantum Electro-Gravitic (QEG) device is straightforward, electronically speaking that is. The system operates in a cold fashion due to the lack of direct connections. The circuit utilizes antenna propagation via the reception and the transmission of frequency based EM energy to accomplish the interconnectivity of the circuit.

The QEG-system includes a pair of dielectric structures positioned strategically proximal to each other, which receive incident electromagnetic radiation. The volumetric sizes of the component structures may be tuned so that they resonate at the atomic transition frequency of the incident radiation so that secondary radiation emitted therefrom at resonance may interfere destructively/constructively with each other producing either resonant oscillations or a beat frequency radiation

which is at a frequency that is amenable to conversion to electrical and/or implosive—propulsive energy extracted within any environment.

An antenna receives the beat frequency radiation, which is emitted from a tandem pair of reverse wave cavities. The reverse wave beat frequency radiation from the antenna is transmitted into space through a suitable conductor or waveguide, said energy having a desired voltage and a reversed waveform such that the emitted energy returns into the system for recycling and amplification purposes ... and energy extraction!

The white stone you see in the first picture (A) is turned into the energy you see in the second (B).

Our studies of Aetheric energy, mono-atomic (M-state) elements, sacred geometry, and archeology are revealing that some civilizations utilized technology that we are just barely beginning to understand. One of the most amazing discoveries we have made is a temple made entirely of a white stone material which has M-state, high spin properties. Evidence shows that several ancient civilizations utilized this technology (Egyptian, Mayan, Hebrew, etc). Temples and/or castes were dedicated to the study and use of these elements and the associated energies. Elements in this high spin state act as a superconductor. Its rate of

Ancient Technology Meets Quantum Physics

Vernon Roth

vibration is much higher than its regular form. It tries to bring the elements around it up to its own vibratory level.

Physics tells us that energy and matter are the same, but exist in different rates of vibration. Changed significantly, one can become the other. The Aether is energy that can be turned into any form of matter. It exists everywhere and is in motion. Baron Von Reichenbach quantified and qualified aether as well as its motion. The Aether is that inter-dimensional state that is the interface between spirit and matter.

Combining ancient technology with our modern understanding of electricity and magnetism we find that amazing things are possible. The key lies in turning the white stone you see in the first picture (A) into the energy you see in the second (B). Once this is possible the limits are only placed by the imagination.
