

The "VIBE" Machine

Gene Koonce

The VIBE machine is an electronic device that uses the principles of "tuning" to bring the vibrational level of your body back to its natural state of being. (VIBE stands for *Vibrational Integrated Biophotonic Energizer*.) For example, if you tap a 440 Hz tuning fork and move another 440 Hz tuning fork near it, the second tuning fork will duplicate the same tone (or oscillate) with the same tone as the one that was tapped. However, if you bring a 442 Hz tuning fork near the 440 Hz tuning fork, it remains silent, and does not oscillate, or duplicate the tone.

Similarly, the cells of the body are capable of finding their own frequency. When you transmit all of the frequencies to the human body, the cells will find their own resonate frequency and oscillate at their own correct vibrational rate. When this occurs, the height, or amplitude of the frequency, will increase allowing the cells to operate at their optimal level.

The device has 12 noble and inert gas tubes that are precisely positioned in a concentric ring to create a strong electromagnetic field around the machine. The gas tubes have been selected to develop specific results within the bio-photonic spectrum. Some of the tubes contain argon, krypton, and water vapor. Activated by a low power laser, it produces all the frequencies needed to resonate a higher pitch within your body.

Golden Ratio and Human Consciousness

Dr. Patrick Flanagan

In the 1960s, Patrick Flanagan invented the Neurophone which had implications so profound and far reaching that the technology was classified. Neurophone technology allows the brain to "hear" directly through the nervous system without using the ears. It is now a highly effective tool for learning, relaxation, and meditation.

The Neurophone induces high alpha and theta waves, thus allowing researchers to observe the effects of various waveforms. The Golden Ratio, the Fibonacci Series and the "Davinci Code" and the state of boundless unconditional love are related to developing Fractal overtones in the overtones found in biological rhythms such as those found in EKG and EEG waveforms.

This lecture examines the electronic biology of the body and how the cells and cell components have electrical functions and are designed to both transmit and receive electromagnetic energies through both hardwired semiconduction and wireless communication mechanisms. Issues that will be addressed include the concepts of the electronic properties of cells and tissues, biological electronic circuits, the liquid crystal nature of proteins and DNA, resonant frequencies, resonant energy transfer, and signal induction through resonant energy transfer.

By way of illustration I will examine a new passive technology that utilizes nontransdermal patches to frequency

Dr. Patrick Flanagan seeks to validate his scientific breakthroughs through stringent peer reviewed studies. He will discuss his latest research findings in the exciting area of human consciousness. He will demonstrate and discuss his Golden Ratio Series Fibonacci Noise Generator which is described as an *anti-HARP* consciousness device.

He will also demonstrate his new Gold Ratio Series human heart beat generator. This device generates the perfect cardio waveform of a person experiencing a state of Blissful Consciousness!!!

Biological Impact of Resonant Energy Transfer Using Active and Passive Devices

Steven Haltiwanger, MD

modulate the magnetic field of the body. Frequency modulation of the body's oscillating magnetic field provides the capability of using the body's own energy field as a carrier wave for information; much like a radio station frequency modulates a radio signal with voice information. Selection of the proper frequency code can be utilized to activate cellular processes such as increasing energy production through acceleration of fat metabolism or stimulating the production of hormones.

Also I will discuss new active technology that uses special electromagnetic frequencies in the visible and infrared light range to increase collagen formation in the skin and reduce wrinkles and speed the healing of skin after injury or surgery with reduced scarring. I will tie in NASA research into the use of light in healing.
