

Introducing the Photon-Genius!

Warren Starnes

Ed Skilling was commissioned by California Cancer Doctors in 1959 to apply his electronics genius and utilize “space-aged” electronics to improve the original Rife Instrument technologies. His very first electro-medicine instrument got better results than any technology in history and he has made the most “result-oriented” advancements to date. The Skilling Institute’s Photon-Genie, recommended by many doctors and healthcare practitioners, provides more “noticeable” results with serious conditions than any other technology available today.

The very latest technology released in 2010 is the Photon-Genius. The Photon-Genius utilizes sophisticated, proprietary Skilling circuitry to generate the dynamics of photon-genetic energy, life force energy transmission, harmonic frequency tube technology, harmonic infrared energy transmission to communicate with all the cells of the body to balance and enliven all systems and organs of the body. The Photon-Genius transmits, imprints, and reminds the human body at the cellular level of the essential creative process of enlivening energy that results in natural and empowered regenerative processes throughout the body. This achieves ever-accelerating levels of health, wellness and more efficient, natural regeneration and rejuvenation to make the body the best it can be!

Magnetic Resonance Stimulation (MRS)

Robyn Benson DOM

In 1886 Nikola Tesla warned humanity that the invention and implementation of ac electricity would be a blessing, curse and challenge. He understood exposing living organisms to artificially generated frequencies such as ac, radio, and other broadcast frequencies has a negative impact on living cells. While we have reaped many of the benefits of ac electricity, on the downside we have seen the proliferation of thousands of diseases.

In addition to 30,000 known diseases, the World Health Organization has now coined the term Electro-Hyper Sensitivity (EHS), which describes the disease pattern caused by electromagnetic field radiation, electromagnetic signals (radio, TV etc) and other artificially generated frequencies. Some of the most common symptoms are: head-

aches, fatigue, dizziness, skin rashes, poor memory and digestion, MS, suicidal tendencies and depression, sleeplessness...just to name a few.

Dr. Benson will speak about the revolutionary benefits of Magnetic Resonance Stimulation (MRS) and how it helps millions around the world cope and recover from EHS. MRS is a clinically documented and scientifically proven form of low-intensity, pulsed electromagnetic field application. It is a safe method to increase oxygenation, energy, detoxification, nutritional absorption, pain reduction and it helps reverse all diseases and is an antidote to electromagnetic pollution.

LifeWave’s Blood Glutathione Patch

Extraordinary New Technology Elevates Blood Glutathione Levels Through A Unique Patch

Steve Haltiwanger MD

Blood Glutathione levels are one of the most important indicators of our overall health. As the master antioxidant in the body Glutathione, has a range of diverse metabolic functions including acting as a free radical scavenger, “recharging” depleted antioxidants back into their active state, maintaining the immune system, and detoxifying chemicals, drugs, and heavy metals through the liver and kidneys. The military has ongoing research programs devoted to methods of increasing glutathione levels in troops because glutathione can help protect against both chemical and biological warfare agents.

Prior studies funded by the US military have identified the need for a technology that is capable of elevating blood Glutathione levels on a consistent basis,

with technology practical to deploy to troops on active duty. Studies have shown that depleted Glutathione levels lead to a decrease in an individual’s physical performance, hearing loss when exposed to high ambient sound, premature muscular fatigue, and decrease in heavy metal elimination.

This talk will disclose a method for rapidly elevating Blood Glutathione levels through a novel electronic signal transduction mechanism. LifeWave has pioneered the development of nontransdermal patches that use human infrared body heat as the power source. When LifeWave patches are placed on the surface of the skin they establish communication links with the human body providing the ability to safely trigger biological functions such as elevating blood Glutathione levels.
