Rodin Torus

ExtraOrdinary Application of Vortex Based Mathematics

Randy Powell

This thorough and easily absorbable overview of Vortex Based Mathematics and it's applications will include a comprehensive analysis of the mathematical formulation of the Rodin Torus beginning with the fundamental axioms of the Rodin Symbol of Enlightenment Schematic. The construction, form, and function of a mathematical torus based on these principles will be examined. Topics covered will include mathematical perfection and number stillness, vibration and functionality, the number nine, self-similarity, fractals, polarity, diagonal motion and bilateral symmetry, harmonic doubling and halving, powers of ten, inverse reciprocals, harmonic phasing, and triangulated polarization, multiplication tables as an implosion/explosion interferometry Pattern, numbers as pulses, fields, and one way vortexes.

Any and all technical applications of this mathematics will be explored. This includes the importance of sound in connection to acceleration, gap spaces and electrical efficiency, why there is no such thing as electro-magnetism, gravity as a result instead of a force, vortices, buoyancy and anti-gravity, supercomputing and number compression, plasma coils, quantum non-locality, antennas and sound systems, magnetic flux fields, gene expression and non-invasive surgery, fractal architecture, pyramids, and lastly singularity, implosion and inexhaustible energy.
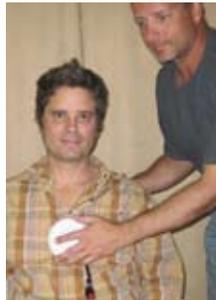

Ace-O-Clubs Motor... Using Pulsed Rodin Coil

Jack Scholze

A brushless DC pulse motor powered by a Rodin coil coupled to a shaft mounted neodymium cylinder magnet rotor. The low voltage DC pulses are synchronized to the rotor via a Hall-Effect sensor, which provides a regenerative feedback loop. The motor runs smoothly at all speeds, and without a load will accelerate to 25,000 RPM and higher, limited only by the friction in the bearings and air resistance. The Rodin coil provides a powerful pulsing magnetic field near the center of the coil. The motor torque is proportional to the strength of these fields and the strength of the permanent magnet fields of the neodymium rotor, which is magnetized through the diameter. It is an off the shelf 1 inch diameter cylinder from K&J Magnetics.

A secondary function of the motor is the charging function provided by the collapsing magnetic fields which occur during each motor pulse. These voltage spikes are fed to a diode and on to the charging item, which may include batteries and capacitors. A portion of the input energy to the motor is recaptured in this manner. The motor is setup to run solely on Supercapacitors as an option, to see how well the charge function recaptures the incident source energy.

Health & Biological Effects of the ExtraOrdinary Rodin Coil

Use of Rodin coils is strictly experimental!
_____
Always Exercise Caution When Using Any Electrical Device!

This lecture will be about the various ways to energize the Rodin coil and configure it to bring about desirable biological effects in both human and plant cells. The current design of the coil presented has never been shown or demonstrated in public before. Testimonials will be provided from people who have experienced the coil's effects as well as introduce scientific evidence proving the theory behind its energy generation and effects on living cells.

Attendees will see how the counter-rotating electromagnetic vortex of a specially built Rodin coil when energized with the proper harmonic frequencies can stimulate certain portions of DNA. Research conducted in the 1990s by J. Benveniste used a computer sound card and a pulsed electromagnetic wave to reproduce sounds in bodies

Jamie Buturff

of test subjects where tissue cells then stimulated the natural communication with other cells in the body, effectively replacing the need for pharmacological and harmful drugs previously needed to affect the same result.

This new device doesn't just produce sound but also an electromagnetic vortex coupled with a pulsed magnetic field that penetrates living cells with special harmonic frequencies. These frequencies, or multiple harmonics of frequencies, are derived from the cosmic number of 432.which is found in ratios and lengths of the Earth, Moon, Sun, the Great Pyramid of Giza, Stonehenge, and many other seeming "coincidences" which I will reveal.

The geometry of this coil combined with the cosmic harmonic of 432 produces the Pythagoras Music Spiral and the Fibonacci Intervals which stimulate living cells into becoming what Nature naturally intended; vibrant, healthy, and immune from disease.
